MIND READING COMPUTER (SEMINAR) (01/2020 – 05/2020)

Mind reading may be defined as the inferring of the human thoughts, emotions and desires etc. First simplest step of mind reading is by simply understanding the facial expression given by the person as people express their mental states mostly through facial expressions and gestures. The machine works by using digital video cameras which analyzes a person's facial expression in real time and infer person's underlying mental state such as thinking, confused, interested, bored, agreeing, disagreeing, happy, sad and angry. Prior knowledge of how particular mental states are expressed by the facial expressions and head gestures and storing it in the database of the machine and then by matching to give the mental state.
